

Windows should look out more clear and attractive, serious. The Handling should be better.

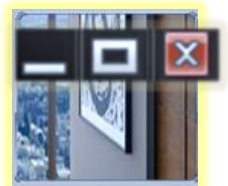

1. For what do you need colored Icons, simple Elegance with Glass-Effect, like “professional” Windows-Desktop would look more professional. Tiles should be all the same Size and with common-Look of Glass and additional the Picture of your Choice, that you view in Standby-Complete, just with A Clock upside.

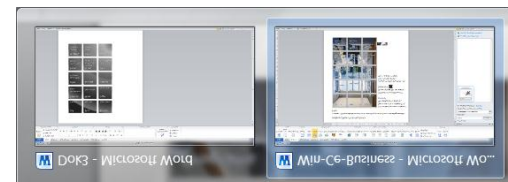

- Do you need -> Symbol? There is enough Place for 3 Rows of glazed Tiles.

- Do somehow miss Symbols of Tiles Function? Everyone can read Words. When you beginn Minimum-Design, why not finish IT? There should be some Alternative for Business-People, that gives Difference to all the coloured Phone-Toys!

2. There should be some Taskmanager with \_ [] X Symbols at the opened Windows-Tiles when you click on two Times.

3. Animated Icons help to overview running Applications. Some Flash-out-Effect should be there when you hold the Finger on A Tile filling the Screen, with the Preview of the Tiles Function. Example: opened Websessions, like this 1 from Windows-Desktop.

4. Also, i miss the original Fileexplorer - there should be additional some Upload-Client for Skydrive, FTP-Uploader and A physical Share-Function, with Bluetooth and via Mail. The Media-Explorer ignores all my File-Structure, Names, Formats. There is not Copy and Paste.

#### 5. Tiles & Functions

A >>Pager<< could collect every Social-Networks together and RSS. There should be Updates for additional Headlines, Networks and for Developers Plugins. At the Market (-place) you can buy.

Library, is the classic Study-Tool I'm searching for! Please look at the Tiles on the Preview-Bitmap. This integrates A Function for re-viewing Bookmarks – also from Web-Sessions, view PDFs, also for Music-Playlists. Library should help to load Sessions fast.

More i put together:

- Calls/ Contact-Managing, take Photo, Video-Call
- Chat/ for “on-Phone” Contact-Managing, that is opposite to Social-Networks, because this Fun-Stuff steals much Business-Time, it's sourced up to the Pager with all the other Headlines.
- Camera
- Calendar/ Appointments, take Pictures+ Barcode-Scanner, Notes
- collect and draw Ideas/ ---> #8, the Creativity-Studio (downside).
- Office is classic MS-Tools/ with Calculator, Countdown-Function, Light on Device,
- Navigation
- Browser
- Music
- File-Explorer
- Programs/ Applications, Tools, Entertainment (like TV, Gambling, Videos on Line)

6. There should be the Stylus again by exactly working Ballpoint-Top that is Pressure-sensible.&

7. Hand script-Recognition should be re-integrated. Modes of Recognition\_

- 1 Script-Mode
- 2 geometric drawing
- 3 Symbols (search for Clipart online)
- 4 Math-Formula-Recognition.

R-M should switch automated.

- There should be Updates.

## 8. CREATIVITY - STUDIO

There, the best Ideas are on my Way, what i like most on Microsoft-Products is Completeness.

There should be some Design-Mode (look, Ideas-Tile), that unites

- MS-Paint, adds Geometric-Drawing-Mode, combined with
- MS Word and Excel, auto-recognizing Text-Boxs, Tables and
- organizes all Pages together MS-Powerpoint ready
- also with Youtube-Output, by adding Audio-Comments, that you reccord later.

## 9. No Borders, while-Brainstorming, when you collect Ideas!

Just the raw-Idea (on a virtual Sheet of Paper) should count. Idea, that you can simply start with and the Device works like Content-Manager; it recognizes, asks and re-arranges your Draw and puts Ideas out later, in option-able Multi-Format of your Choice (Bitmap-Collection, Powerpoit, Email, Powerpoint and Video-Presentations, also raw-Web-Presentation with Photocollections).

You can edit all the raw-Stuff later, on your Desktop, (that's for Homework).

## 10. Updates and Panel-Programs can be bought at the Market (-place, ---> Tile), Example: with CAD-App.
